

Week-3[Day2]

Classroom

1. Sample Testcase 1

The screenshot shows a web browser window with the URL 'localhost'. The page title is 'User Story to Tests' and the subtitle is 'Turn user stories into comprehensive, structured test cases in seconds.' The page features a form on the left for inputting a user story and a table on the right for generated test cases.

Story Title *
HC-311 — Automated Insurance Pre-Authorization for Radiology Tests

Description
Before scheduling any CT, MRI, or ultrasound procedure, the system should trigger an API call to the insurance provider to check if the procedure is covered under the patient's plan. If authorization is required, it should initiate the pre-authorization process automatically and store the approval ID in the patient record.

Acceptance Criteria *
Given a test is not covered, When the result is received, Then the system should notify both the coordinator and patient, and offer alternative payment options.

Additional Info
Any additional information (optional)...

Generated Test Cases
12 test case(s) Model: openai/gpt-oss-120b Tokens: 2306

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Successful eligibility verification and pre-authorization for covered radiology test	Positive	System calls insurance API, receives eligibility confirmation and pre-authorization requirement, stores authorization ID and approval date in billing record, and displays confirmation message
TC-002	Schedule test that is fully covered without pre-authorization	Positive	System calls insurance API, receives coverage confirmation with no pre-authorization needed, schedules test and displays success message

2. Sample Testcase 2

The screenshot shows the same web browser window as the first one, but with a different user story input. The page title and subtitle remain the same.

Story Title *
HC-310 — Doctor Prescription Verification Workflow

Description
The system should enable doctors to view medication details prescribed by other physicians or generated automatically from patient diagnosis. It should allow verification of dosage, potential interactions, and duplicate drugs. Once verified, prescriptions should automatically sync with the pharmacy module for patient dispensing.

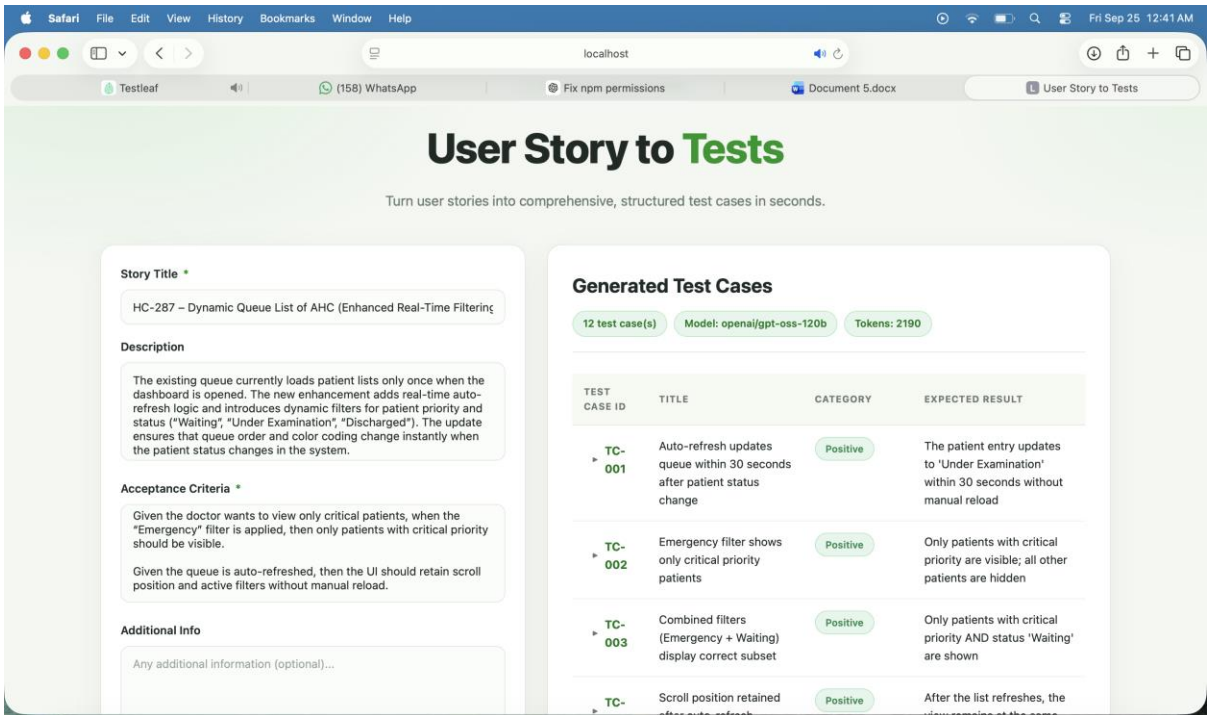

Acceptance Criteria *
Given a verified prescription, When it is approved, Then it should automatically update the pharmacy dispensing queue.

Additional Info
Any additional information (optional)...

Generated Test Cases
10 test case(s) Model: openai/gpt-oss-120b Tokens: 2140

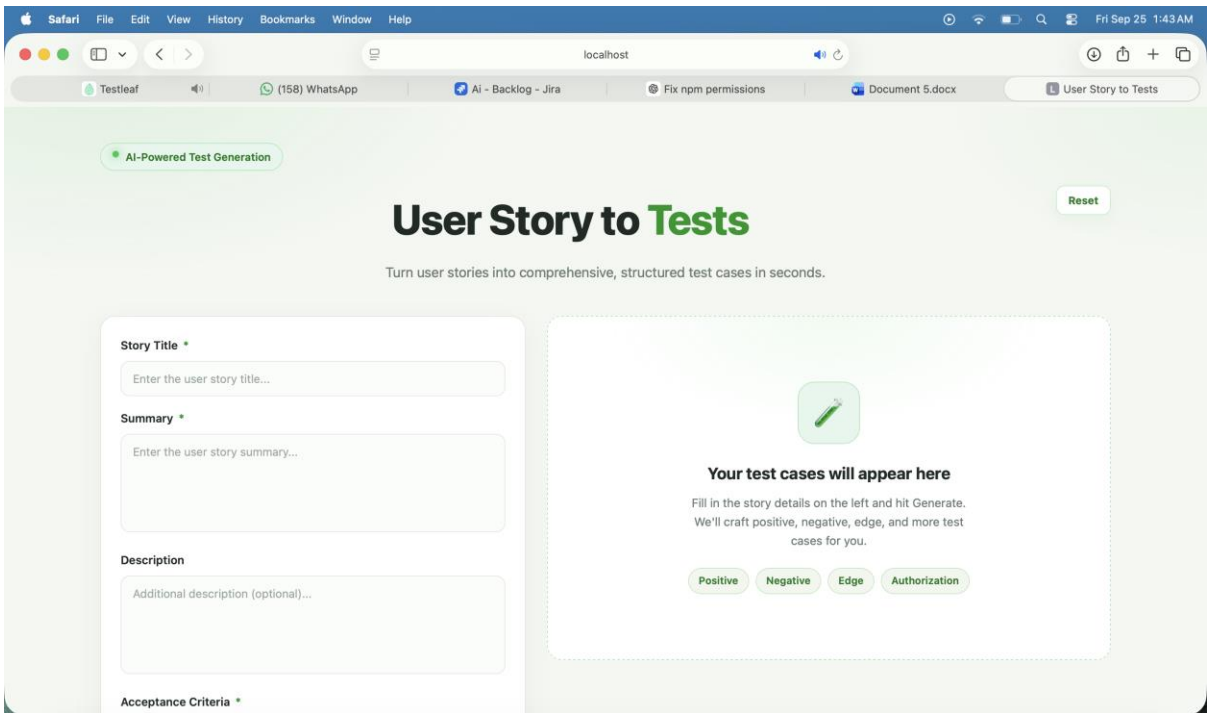

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
TC-001	Display pending prescriptions for authorized doctor	Positive	All pending prescriptions for the selected patient are displayed in a list
TC-002	Highlight dosage conflict and show AI recommendation	Positive	The conflicting dosage is highlighted and an AI-based recommendation for correction is displayed
TC-003	Approve verified prescription and update pharmacy queue	Positive	Prescription status changes to "Approved" and the prescription appears in the pharmacy dispensing queue

3. Sample Testcase 3

1. Summary Field Prompt

Want to have Mandatory Summary field below Story Title field. This should be similar to Acceptance Criteria. The position should be below Story Title and above Description

2. Reset Button prompt

There is no Reset button in the frontend to reset all the input and output generated. Want to have a Reset button on the top right corner below the User Story to Test title in the frontend application. First analyse and come up with the impacted files. After I review and approve, then implement in Agent mode.
